

Christmas and New year Celebration - 2026

The Department of Speech-Language Pathology along with Student Council, School of Rehabilitation and Behavioral Sciences, organized a Christmas Celebration Program as part of its commitment to holistic development, community engagement, and inclusive practices. The program was conducted for children receiving therapy services, along with their parents, faculty members, students, and staff. The primary objective of the celebration was to create an inclusive, sensory-friendly festive environment that supports social participation and emotional well-being of children with communication, speech, and language difficulties. The event also aimed to encourage social communication, peer interaction, confidence building, and strengthening of therapeutic rapport in a non-clinical setting. The program began with a welcome address and opening remarks, followed by Christmas carol singing by students, which helped establish a positive and joyful atmosphere. Various inclusive activities and games were organized, keeping in mind the diverse abilities and therapeutic needs of the children. These activities were structured to promote interaction, participation, and functional communication skills. The students of SRBS participated in short skits and dance performances, providing them an opportunity to express themselves and made the environment cheerful. A special Santa Claus performance was organized as part of the celebration, which delighted all the children. The performance brought excitement, laughter, and festive cheer, ensuring that every child thoroughly enjoyed the experience. A gift distribution was organized for the children, followed by cake cutting and photo sessions, providing an opportunity to capture the joyful moments of the celebration and creating lasting memories for the participants
